
Event not showing

Posted by Sep - 2007/10/05 01:55

I had an event where everything worked fine. I then unpublished it and created a new event. Now no matter what I do I can't get the event to show in the event list. It shows in the mod_mls_eventstatus but I can't display it. Any ideas?

The list only displays events where the start date is in the future... Did you check on that?
