
Issue editing the map

Posted by slukehart - 2007/10/25 16:09

Hey first off... Thanks for creating this series of incredible components..

I am only having an issue with Seatmap.. I am unable to actually edit it.. I try to place an element and it just freezes at "Processing 'placeElement' AJAX request"

Am I missing something here?

Would appreciate any help..

What browser are you using by chance? :)

Did you make sure that you are using com_mls_seatmap 0.1.1?

I also have a similar (possibly the same) problem, but if i select an element place the the copies of that element i want onto the map, click back and the edit the map again it all shows ok.

Wierd and a little annoying but at least i can create the maps

I have exactly the same problem as Slukehart. I am using com_mls_seatmap 0.1.1 and have tested with the same results on both Firefox 2.0.0.9 and IE 7.0.5730.11. I am accessing the Joomla admin via a PC running Windows XP X64.

I also have all other components and modules loaded, all to the versions specified on the home page at the time this is being written. I'd appreciate any assistance anybody could offer.

Thanks in advance.

Ooops cancel that, I too can use the "refresh" trick in IE to achieve what I need. So yes, I was only seeing the red boxes until I refreshed. Tis a little odd, but I am happily creating now so it's all good! :)
