## file\_get\_contents issue...

Posted by bctrainers - 2007/12/03 02:22

---

On a windows platform, i am having the following issue:

Warning: file\_get\_contents(D:\wamp\www\administrator\components\com\_comprofiler\comprofiler.xml) : failed to open stream: Invalid argument in D:\wamp\www\includes\domit\xml\_domit\_lite\_parser.php on line 1080

Fatal error: Call to a member function getElementByPath() on a non-object in D:\wamp\www\administrator\components\com\_mls\_events\admin.mls\_events.php on line 1290

On line 1080 is: return file\_get\_contents(\$filename);

How would i go about stripping the ending slash on that comprofiler.xml file which is being called to, however is showing up as comprofiler.xml\?

I too am having this problem.  
Thanks, regards Michael.
