
Different approach to eventstatus

Posted by miGu - 2008/03/06 10:49

Could the event status take the information from the seatmap rather than from the participants list? This would make the event status meter a lot more accurate, when it displays the current situation what seats are occupied, which are reserved and which are free, now it just displays who has participated and who has paid.

Or a second module for the seatmap status?

Feel free to make your own ;-)
