## Fatal Error

Posted by anoren - 2008/04/11 21:56

---

Hi All,

I've just installed your software but I'm getting the following error:

Fatal error: Call to a member function setBlock() on a non-object in  
C:\xampp\htdocs\joomla\components\com\_mls\_events\mls\_events.html.php on line 24

Does anyone have any clue as to why this has happened? I've installed all the components (The 7 that are available from your Downloads section). Any help would be most appreciated!

Thanks!

I got the same problem, and I cant find out where setBlock() is defined...

Arent there someone that can help with this?

What version of Joomla are you guys on?

\$.l is an instance of the language class. So you need to have com\_mls\_lang installed.

setBlock is defined in mls\_lang.class.php. \$.l gets imported into each function as a global variable.

Can you put a var\_dump(\$.l); just before the \$.l->setBlock("events") line in mls\_events.html.php and let me know the output when you then browse to the page?

Cheers

i got this output now

NULL  
Fatal error: Call to a member function setBlock() on a non-object in  
C:\wamp\www\lovelan\_v2\components\com\_mls\_events\mls\_events.html.php on line 25 - I am running on joomla! 1.5  
and i know it wont work, but i thought it was a odd error...  
And wont it work if i use the legacy module that follows the joomla 1.5?

And when i try and go to the com\_mls\_lang in administration i get this message:

404 - An error has occurred.

Component Not Found

It does not work on Joomla 1.5. Not even in legacy mode.

Oh, thats a bummer! :(

I am setting up an computerparty with about 300+ people, and this module would suit the lan perfectly, but we are running Joomla! 1.5 - yeye, then we have to downgrade to 1.0.15...

Anybody fancy testing com\_mls\_events on Joomla 1.5 for me? I kinda got it working on my testmachine and can provide willing testers with a Zip. Didnt test much, just got it loading and clicked through a few pages. So a tester should be willing to go through all the options and try as many things as possible to check that it works. If this goes smoothly, I will continue on making the rest of the components run on Joomla 1.5 (legacy mode - obviously).
