## How to remove the accessories and seats key?

Posted by mnal - 2008/05/04 07:55

---

How do you remove the accessories and seats key at the bottom of the seating chart?

Also the side bar of my template interferes with the seating chart. Any possibility of tweaking the theme for only this page? All I want on the seating chart is the site header and the seating chart. NOT the right hand menu.

Thanks

How do you remove the accessories and seats key at the bottom of the seating chart?

On the Admin backend, go to "Components" -> "myLANsite Seatmap" -> "Element Categories". You can change the "Show" flag there. Only the ones with a green Tick will be shown in the Frontend.

Also the side bar of my template interferes with the seating chart. Any possibility of tweaking the theme for only this page? All I want on the seating chart is the site header and the seating chart. NOT the right hand menu. Joomla has the lovely ability for you to configure which module is shown on which page. By default, most modules are active on all pages. But if you configure all the modules in your right-hand menu NOT to show for the seatmap page, if your template is properly written, the right-hand menu should not show up at all.

Moensch,

I sure could use your help with seating and tournament not working on my website. If you want I'll email you my backend admin info to take a look at the problem.

Presently I can't setup tournaments or edit seat maps. I'm sure you can figure it out faster than I can. I've been searching through the forums for an answer...

Thanks in advance

Keith

I have been occupied for the past week, so no chance to mess with MLS.

Some things on the chopping block are...

adding seat names and numbers to my map.

and

Removing the "tab" above the seatmap that has the maps name on it. It is just WAAAY too small for the name of my event.
