

How to apply CSS to checklist?

Posted by mnal - 2008/05/18 21:00

By default the menu appears like this, with no style.

```
$i = 1;
$links = array(
  "sign_up" => array(
    "text" => $l->m("sign_up"),
    "url" => $mosConfig_live_site."/index.php?option=com_registration&task=register"),
  "enrol_for_event" => array(
    "text" => $l->m("enrol_for_event"),
    "url" => $mosConfig_live_site."/index.php?option=com_mls_events&task=enrol&eventid=".$sevent->id),
    "pay" => array(
      "text" => $l->m("pay"),
      "url" => $mosConfig_live_site."/index.php?option=com_mls_events&task=details&eventid=".$sevent->id."#financial"),
  "get_seat" => array(
    "text" => $l->m("get_seat"),
    "url" => $mosConfig_live_site."/index.php?option=com_mls_seatmap&eventid=".$sevent->id),
  "create_teams" => array(
    "text" => $l->m("create_teams"),
    "url" => $mosConfig_live_site."/index.php?option=com_mls_teams"),
  "enrol_for_tournaments" => array(
    "text" => $l->m("enrol_for_tournaments"),
    "url" => $mosConfig_live_site."/index.php?option=com_mls_tournaments&eventid=".$sevent->id)
);
```

?>

When I try to add style to the links, nothing works.

```
$i = 1;
$links = array(
  "sign_up" => array(
    "text" => $l->m("sign_up"),
    "class" => "mainlevel",
    "url" => $mosConfig_live_site."/index.php?option=com_registration&task=register"),
  "enrol_for_event" => array(
    "text" => $l->m("enrol_for_event"),
    "class" => "mainlevel",
    "url" => $mosConfig_live_site."/index.php?option=com_mls_events&task=enrol&eventid=".$sevent->id),
    "pay" => array(
      "text" => $l->m("pay"),
      "class" => "mainlevel",
      "url" => $mosConfig_live_site."/index.php?option=com_mls_events&task=details&eventid=".$sevent->id."#financial"),
  "get_seat" => array(
    "text" => $l->m("get_seat"),
    "class" => "mainlevel",
    "url" => $mosConfig_live_site."/index.php?option=com_mls_seatmap&eventid=".$sevent->id),
  "create_teams" => array(
    "text" => $l->m("create_teams"),
    "class" => "mainlevel",
    "url" => $mosConfig_live_site."/index.php?option=com_mls_teams"),
  "enrol_for_tournaments" => array(
    "text" => $l->m("enrol_for_tournaments"),
    "class" => "mainlevel",
    "url" => $mosConfig_live_site."/index.php?option=com_mls_tournaments&eventid=".$sevent->id)
);
```

?>

Am I doing this the wrong way? Please help!

Thanks!

You are doing it in the wrong place. You just add a value to the PHP Data arrays, but are not displaying it anywhere in the HTML code. Look further down where the `begins` and add your class straight there.

I was inputing that code everywhere I could to see its effect. That was the last location that I tried. The correct line is here.

But the thing is that no matter what I do, I will not be able to do what I want. The second and third replies to this post demonstrate my problems.

<http://forum.mamboserver.com/showthread.php?t=10676>

Off hand would you happen to know of a work around? There solutions don't see to work... links are dead.

Thanks for the speedy reply!
